

UNOSSM

Organ Tracking Service

The UNOS Organ Tracking Service (OTS) helps you protect the most priceless gift. Fully integrated with the tools and systems you already use, the OTS trims costs, time and stress for OPOs by giving visibility into organ packages in transit every step of the way.

The UNOS OTS provides OPOs with:

- **Real-time location data.** Your devices ping once every two minutes. Real-time flight tracking and predictive ETAs help you anticipate your package's arrival.
- **Intuitive maps.** Visualizations tell you what you need to know with one glance. When you need more information, find further details with a single click.
- **Instant notification.** Automatic notifications keep you and your transplant programs up to date on each step of the package's journey.
- **Seamless integration.** The OTS integrates with TransNetSM DonorNet® and DonorNet MobileSM, which means your OPO and the transplant programs you serve can use the OTS within your existing workflows and tools.

Find out how the UNOS Organ Tracking Service can streamline your operations. Scan the QR code to learn more and request a custom demo.
