

## U.S. TRANSPLANT SYSTEM AT-A-GLANCE

### WHO WE ARE

UNOS is a nonprofit on a mission to save and transform lives through research, innovation and collaboration. UNOS builds on its experience and expertise to strengthen organ donation and transplantation systems and enhance public health. The nonprofit helps people live life without limits by developing new initiatives, conducting data-driven research and analysis, providing expert consulting services, and advocating for reforms to help patients.

### ORGANS THAT CAN BE TRANSPLANTED

liver

kidney

pancreas

heart

lung

intestine

vascularized composite allografts

# 24/7

365 days a year organ  
matching system

# 48,000+

transplants performed in  
2024. the most in one year

# 132

transplants performed  
each day, on average

# 8

the number of lives one  
organ donor can save

# 250+

transplant  
hospitals

# 55

organ procurement  
organizations

# 170 million+

people in the US are  
registered organ donors

# 100,000+

people on the  
waitlist

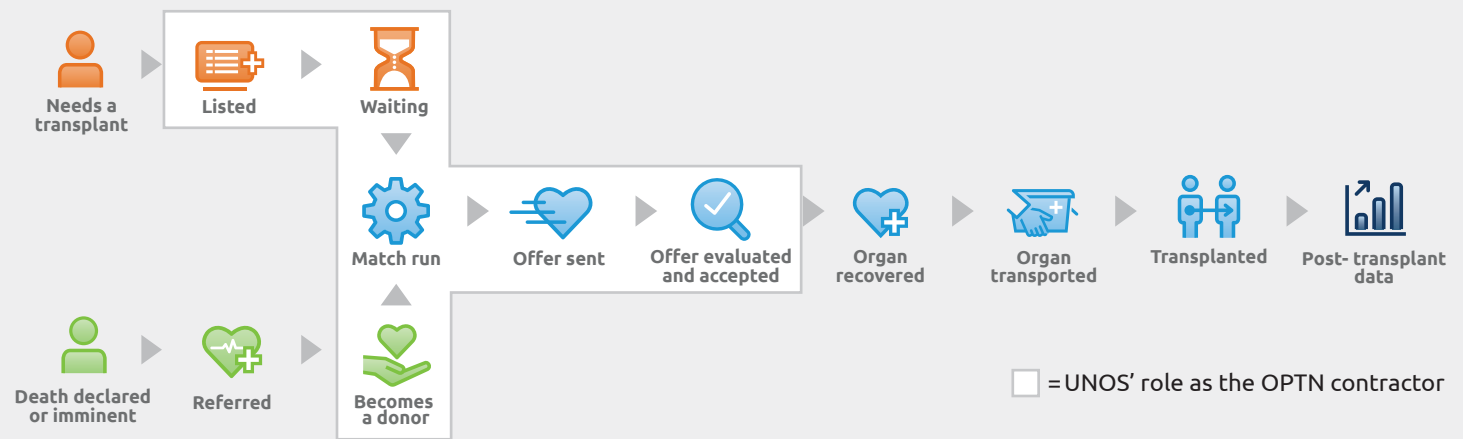

## STRENGTHENING THE ORGAN PROCUREMENT AND TRANSPLANTATION NETWORK

The 1984 National Organ Transplant Act called for a national OPTN contract to manage the donation and transplant system and is structured so the donation and transplant community drives policy, *not the contractor*.

As an OPTN contractor, UNOS:

- **Manages the national transplant waitlist, matching donors to recipients 24/7, 365 days a year**
- **Securely maintains database containing all organ transplant data for every U.S. transplant performed**
- **Unites the transplant community to develop equitable allocation policies**
- **Monitors organ matches to ensure policies are followed**

### THE TRANSPLANT JOURNEY

### TECHNOLOGIES AND INNOVATIONS

UNOS' data-driven tools help save and transform lives.

**Organ Trackers:** GPS tool that tracks organ shipments in real-time

**Predictive Analytics:** Models data to predict how long a patient may wait for another organ offer and a patient's survival rate

**Offer Filters:** Filters organ offers for providers to match organs more quickly

**SimUNet<sup>SM</sup>:** Utilizes behavioral science research to help increase the number of transplants

### ADVOCATING FOR A MORE EFFICIENT AND EQUITABLE SYSTEM

UNOS' Advocacy Agenda calls for system reforms to enhance:

- **Mandated automated donor referrals**
- **Mandated in-cabin airline transportation for organs**
- **Mandated organ tracking for unaccompanied organs**
- **Incentivizing transplant hospitals to transplant hard-to-place organs**

### DATA FOR A HEALTHIER FUTURE

UNOS provides a suite of data and analytic services to advance donation and transplant programs' abilities to make decisions, meet regulatory requirements, have successful quality assurance and performance improvement initiatives, and more.
