Modifications to the Open Variance for the Recovery and Transplantation of Organs from HIV Positive Donors

Ad Hoc Disease Transmission Advisory Committee
June 6-7, 2016
Board of Directors Meeting
How does this proposal support the OPTN Strategic Plan?

Promote living donor and transplant recipient safety

- Allows the OPTN to review IRB data safety monitoring reports to identify issues or trends across multiple research studies
What problem will the proposal solve and how?

- Non-specific data submission requirements for the HOPE Act Variance
  - Require members participating in a HOPE Act research study to provide periodic reports from their data safety monitoring boards (DSMBs) to the OPTN

- Absence of an expiration date for the HOPE Act Variance
  - Executive Committee adopted an expiration date of January 1, 2018
Was this proposal changed in response to public comment?

- No changes are being proposed
- Unanimously supported by all regions and committees
- Concerns raised by the ASTS
  - Only required for randomized trials
  - Inclusion of DSMB reports is practicing medicine and interfering with IRB judgment
  - Confusingly heterogeneous data collection
How will members implement this proposal?

- This proposal was implemented on November 21, 2015
- Transplant hospitals participating in a HOPE Act IRB approved research study must provide the OPTN with a schedule of deadlines for DSMB reports and provide them to the OPTN according to the schedule
- To date, all four transplant hospitals that have joined the open variance have met this requirement
How will the OPTN implement this proposal?

- This proposal was implemented on November 21, 2015
- Ad Hoc Work Group will review DSMB reports and other OPTN data to monitor the safety of the research studies
## Overall Project Impact
