# The New Kidney Allocation System (KAS): The First Six Months

Prepared for OPTN Kidney Transplantation Committee September, 2015

> Darren Stewart, MS John Beck Anna Kucheryavaya, MS **UNOS Research Department**

OPTN UNOS

Slideset updated 11/3/15

# Background

- KAS implemented Dec 4, 2014
- Key goals:
  - Make better use of available kidneys
  - Increase transplant opportunities for difficult-to-match patients (increased equity)
  - Increase fairness by awarding waiting time points based on dialysis start date
  - Have minimal impact on most candidates

#### OPTN UNOS<sup>®</sup>

# Background

#### Performance tracked monthly through June ("out of the gate" reports)

(http://optn.transplant.hrsa.gov)

KAS Monitoring Report - June 2015 (PDF - 569 KB)

KAS Monitoring Report - April 2015 (PDF - 748 KB) <u>KAS Monitoring Report - March 2015</u> (PDF - 2.5 MB) <u>KAS Monitoring Report - February 2015</u>, (PDF - 422 KB) <u>KAS "Out of the Gate" Monitoring Report - January 2015</u>, (PDF - 392 KB)

#### Comprehensive, 6-month analysis requested by the kidney committee

- <u>Pre-KAS period</u>: June 1, 2013 December 3, 2014 (18 months)
- <u>Post-KAS period</u>: December 4, 2014 May 31, 2015 (6 months)

# Background

#### Final Report

OPTN KAS Implementation Subcommittee of the Kidney Transplantation Committee

Descriptive Data Request

#### Six-Month Evaluation of the New, National Kidney Allocation System (KAS)

	<b>Prepared for:</b> KAS Implementation Subcommittee Committee Meeting September 24, 2014	<b>By:</b> Darren E. Stewart, MS John Beck Anna Y Kucheryavaya, MS UNOS Research Department
Table of Conte	nts	
BACKGROUI	ND/PURPOSE	2

• Full 6-month report available upon request.

# Kidney waiting list trends

## **Trends in KAS readiness**

 Prior to KAS implementation, centers had entered data to calculate EPTS scores for nearly all patients and had entered signatures verifying unacceptable antigens for over 90% of CPRA 99-100% patients.
 Table 1.1a

## Trends in the kidney waiting list

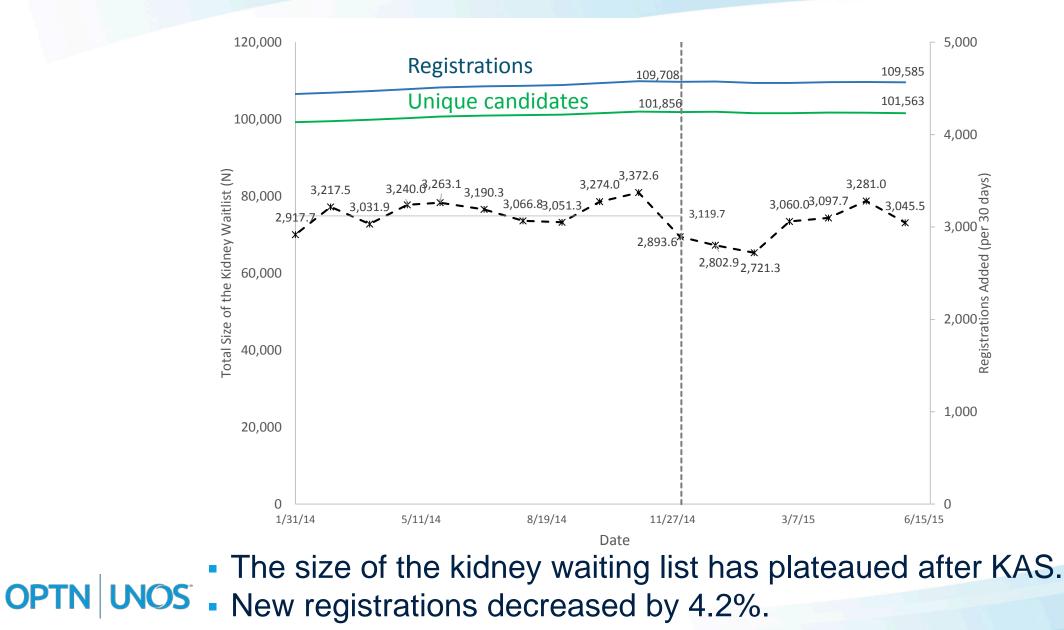

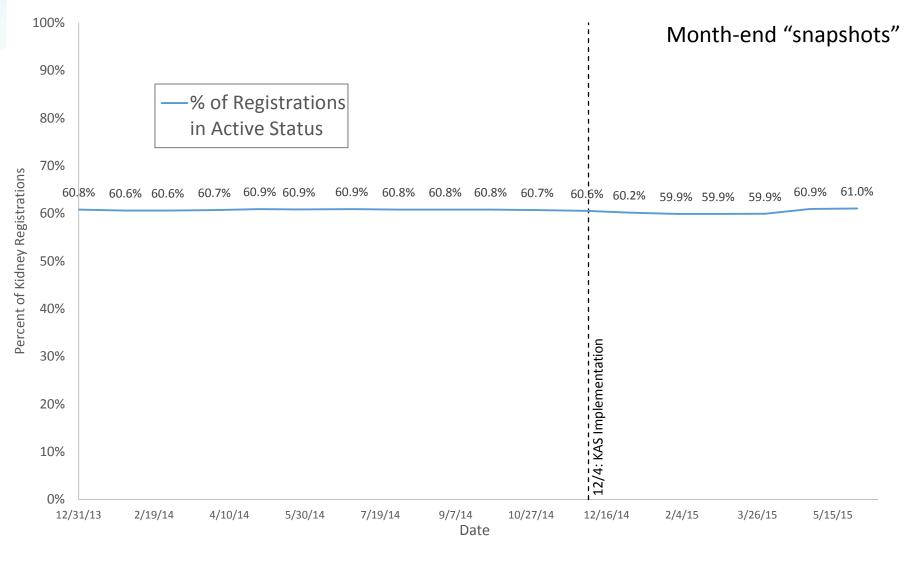

Table I.1a Table I.3a

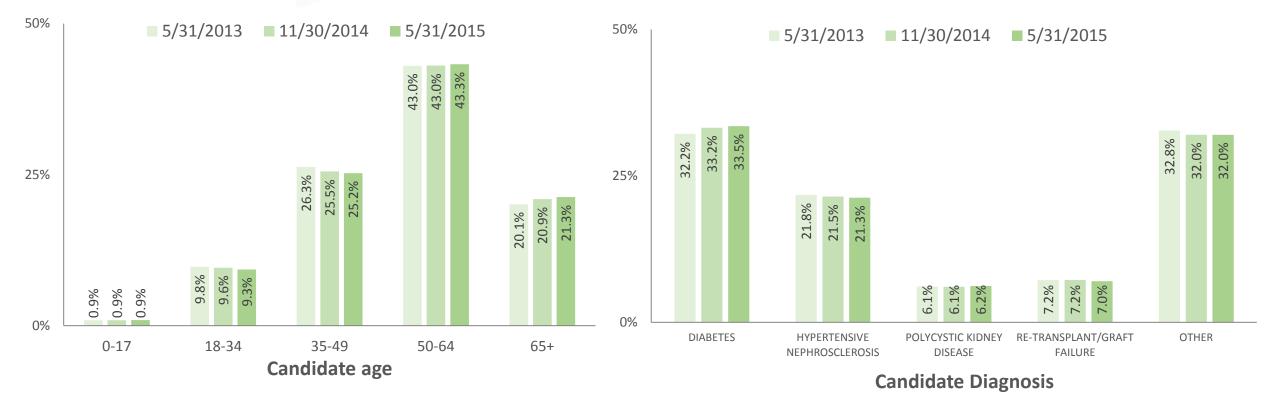

## Trends in the kidney waiting list

OPTN NOS - The % of registrations on the kidney waiting list in active status has remained relatively constant at about 60%.

Table I.1a

#### Trends in the kidney waiting list Comparing 3 month-end "snapshots" by candidate age and diagnosis

**OPTN** 

 The distribution of registrations on the waiting list by candidate age, race/ethnicity, diagnosis, and other factors has changed little.

Table I.2a

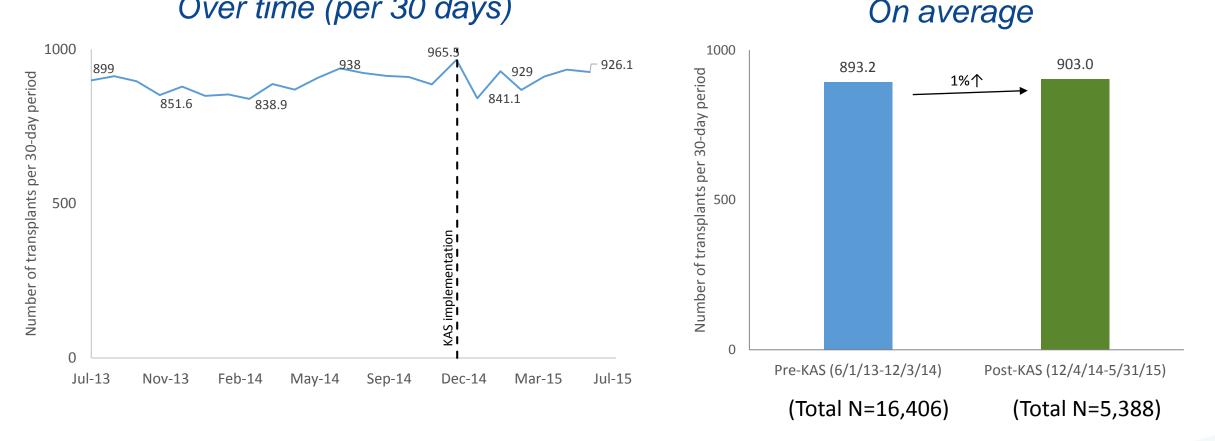

# Deceased donor kidney transplants

#### Solitary deceased donor transplants under KAS Pre vs. post-KAS trends

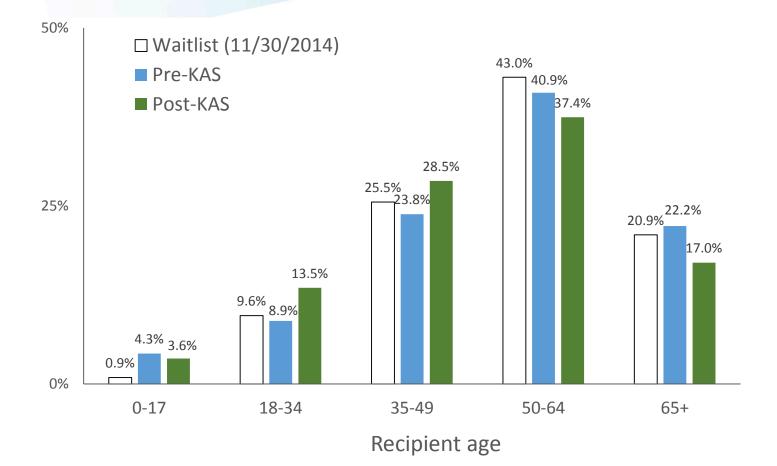

Over time (per 30 days)

**OPTN** 

Transplant volume has increased slightly (about 1%) post-KAS.

Percentage of Deceased Donor Kidney Transplants by Recipient Age

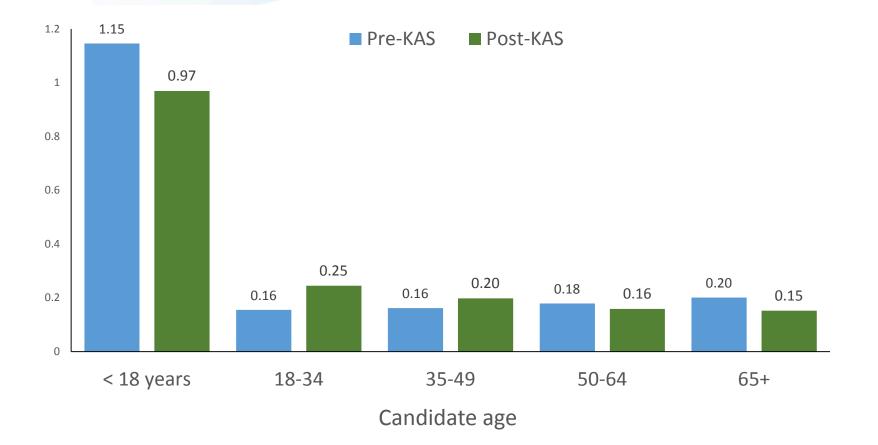

- More young adults (18-49) are receiving kidney transplants.
- Still, over half of transplants are going to age 50+ recipients under KAS. Table 1.2a

Table II.1b

Eras - Pre: 18 months (June 1, 2013 - Dec 3, 2014) Post: 6 months (Dec 4, 2014 - May 31, 2015)

**OPTN** 

# Transplant rates (per active patient-year) by candidate age

OPT

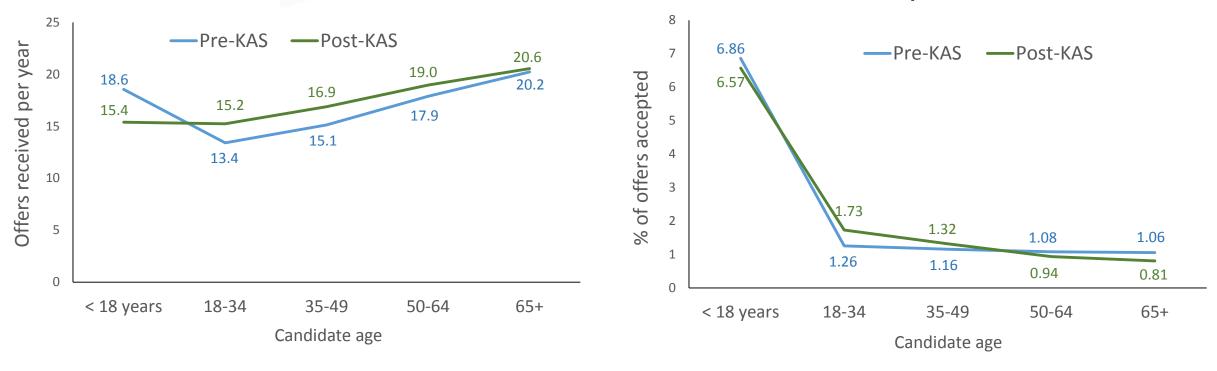

- Pediatric transplant rate fell slightly, but difference is only borderline statistically significant. Rate is still 5 times higher than for adults.
- Transplant rate increase for 18-34 and 35-49, decreased for older patients.

# Rates of receiving and accepting offers by candidate age

#### Offers received

**OPTN** 

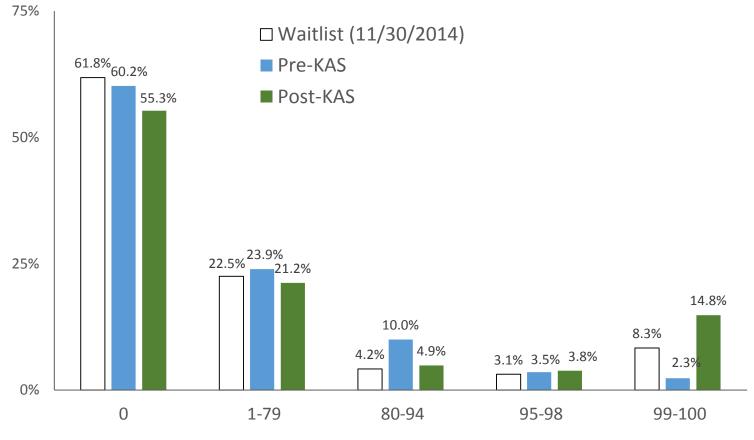

- Offer rates dropped post-KAS for pediatrics, but acceptance rates remained relatively high. Donor quality increased for pediatric offers (avg KDPI↓).
- Offer acceptance rates dropped for older patients and increased for younger adults, most likely due to organ quality (KDPI) differences.

Table II.13 Table III.5

OPTN

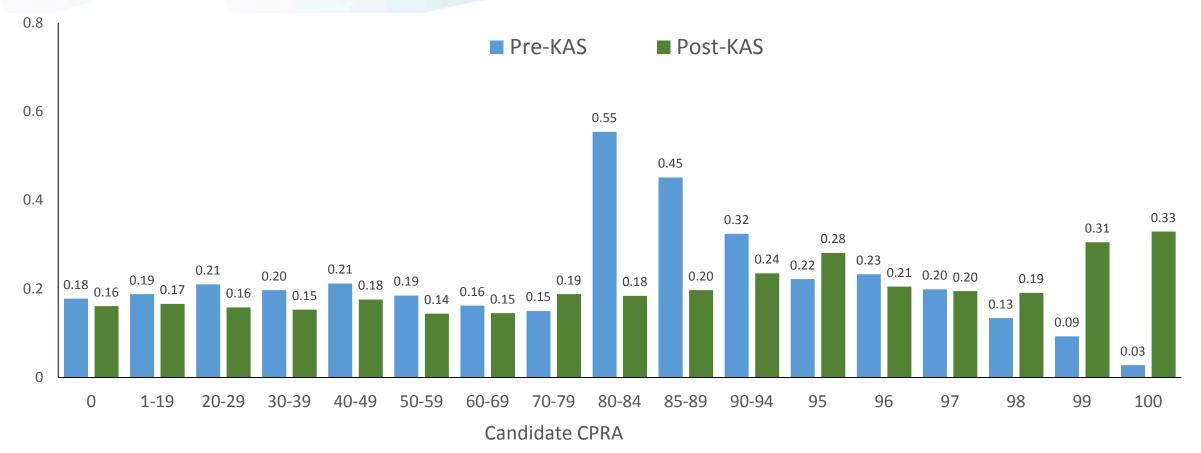

Percentage of Deceased Donor Kidney Transplants by Recipient CPRA

**Recipient CPRA** 

- Transplants have increased sharply for CPRA 99-100% patients.
- Transplants have declined for CPRA=0% and 80-94% patients.

# Transplant rates (per active patient-year) by candidate CPRA

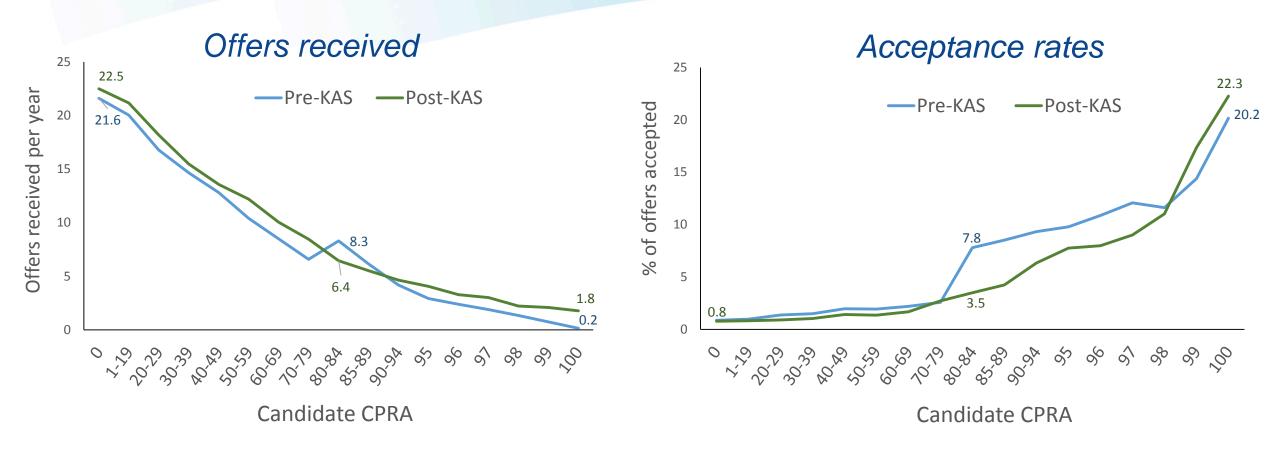

Transplant rates decreased markedly for CPRA 80-94 candidates.

**OPTN UNOS** • Sharp increases for CPRA 99-100 candidates.

Table II.12

### Offer & accept. rates by candidate CPRA

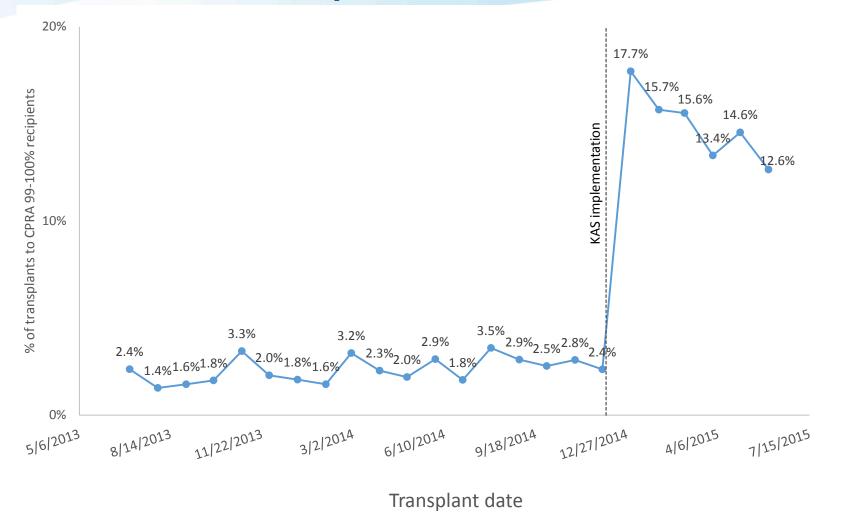

- Offer rate curve smoother post-KAS, and higher for CPRA>95% patients.
- Offer acceptance rates increase as CPRA increases, both pre/post-KAS

**OPTN** 

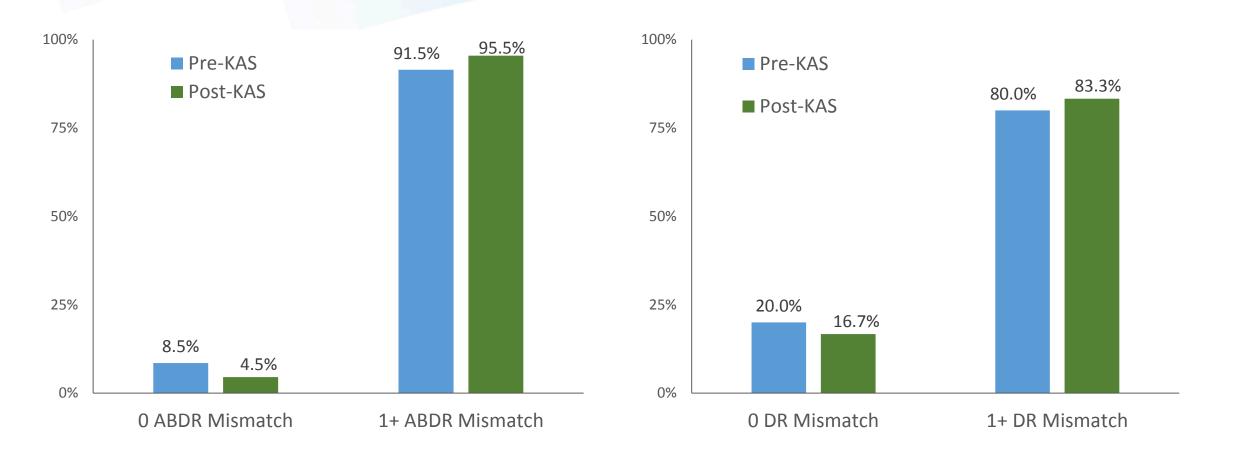

Table II.13 Table III.5

#### CPRA 99-100% recipient "bolus effect"

 Transplants to CPRA 99-100% patients rose sharply after KAS but have been tapering over time, likely due to a bolus effect.

### **Transplants by HLA mismatch level**

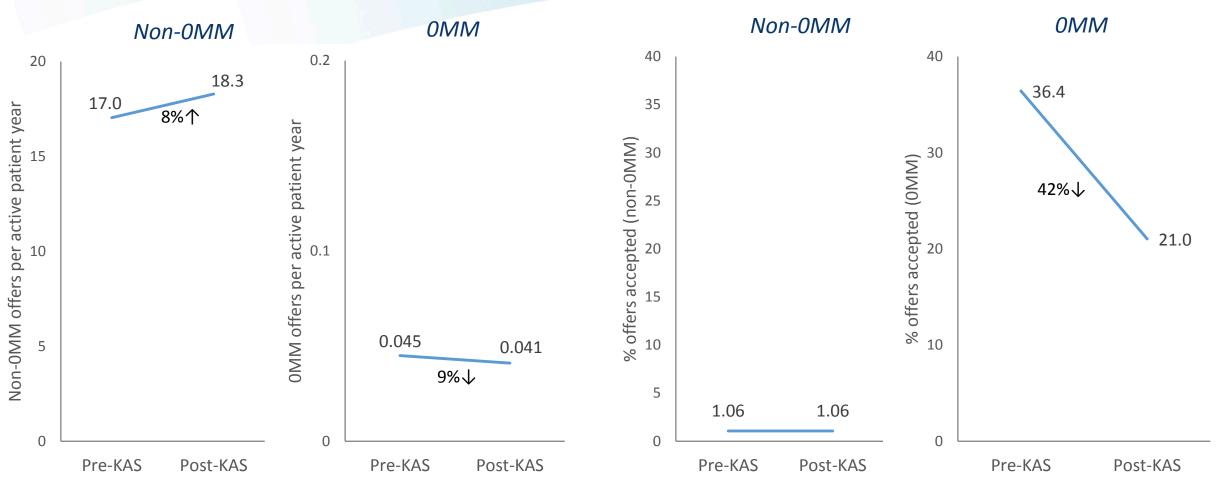

Fewer 0-ABDR and 0-DR mismatch transplants occurred in the post-KAS period.

### Offer rates and acc. rates by HLA mismatch level

#### Rates of receiving offers

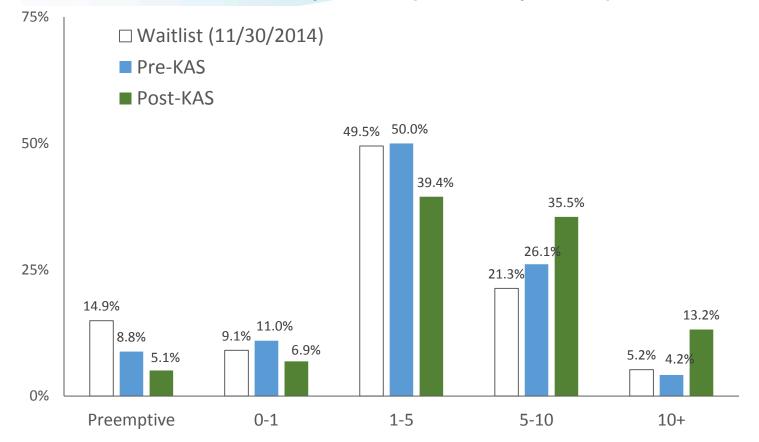

#### % of offers <u>accepted</u>

- OMM offers decreased 9% post-KAS.
- **OPTN UNOS** Acceptance rates for 0MM offers dropped by 42%.

Table II.13 Table III.5

Percentage of Deceased Donor Kidney Transplants by Recipient Duration on Dialysis

Recipient duration on dialysis (years)

- More transplants are going to long dialysis duration recipients.
- Fewer preemptive (before dialysis) transplants.

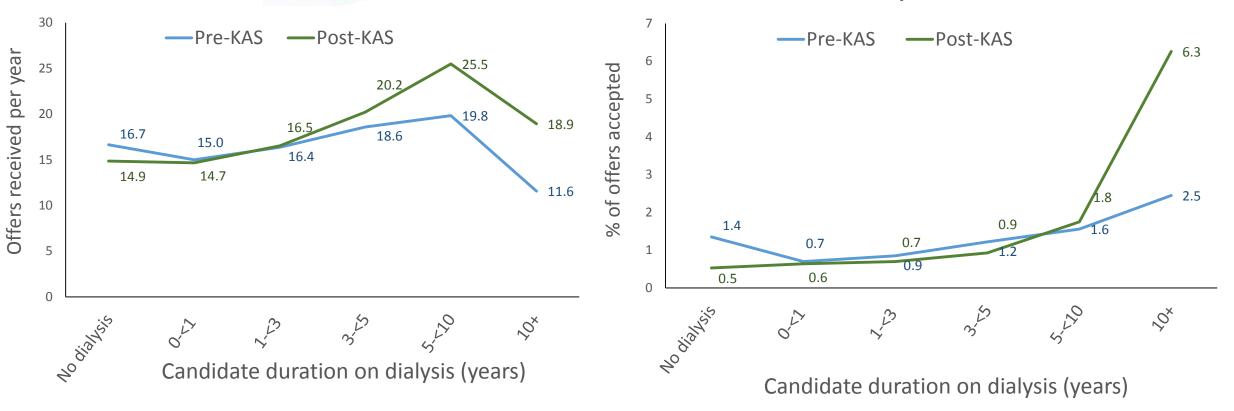

OPTN

## Offer & accept. rates by candidate time on dialysis

Offers received

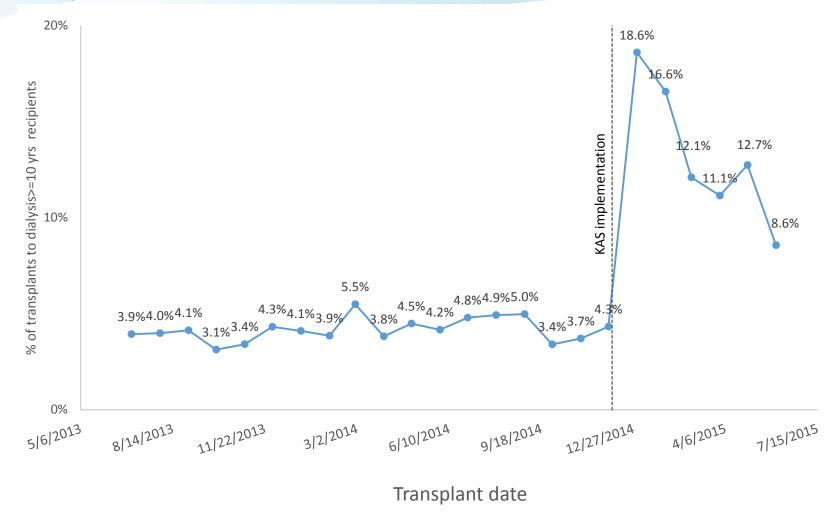

Table II.13 Table III.5

- Offer rates increased post-KAS for high dialysis time patients.
- Offer acceptance rates rose sharply for candidates with 10+ years on dialysis and dropped sharply for preemptive patients.

### High dialysis time recipient "bolus effect"

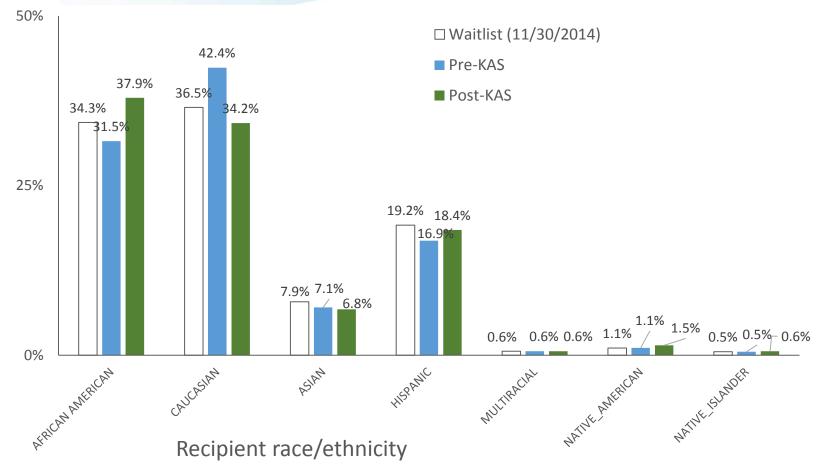

**OPTN UNOS**<sup>®</sup>

 Transplants to recipient with 10+ years of dialysis rose sharply after KAS but have been tapering over time, likely due to a bolus effect.

**OPTN** 

Percentage of Deceased Donor Kidney Transplants by Recipient Race/ethnicity

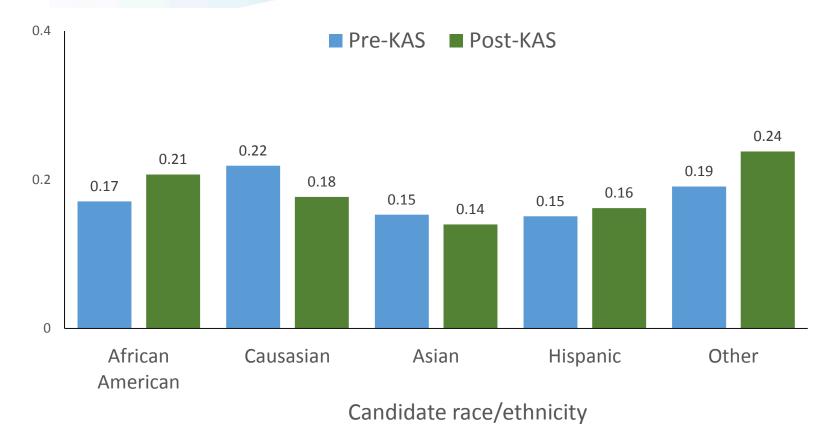

- More African Americans are receiving kidney transplants under KAS.
- Transplants have also increased for Hispanics, but declined for Whites.

   Transplants have also increased for Hispanics, but declined for Whites.

   Table 1.2a
  Table 1.2a
  Table 1.1b

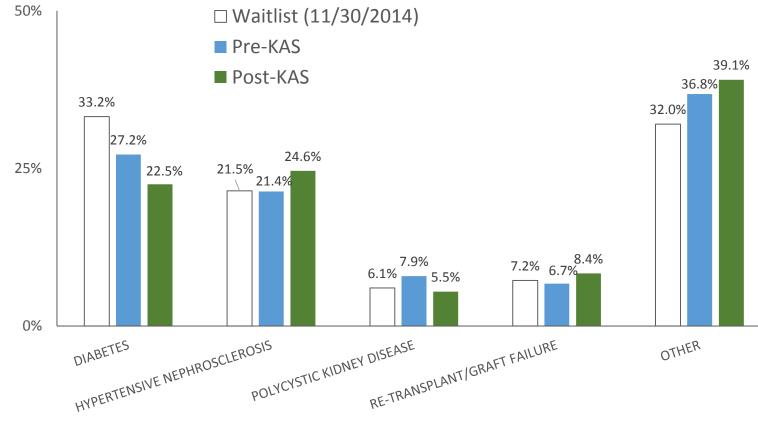

# Transplant rates (per active patient-year) by candidate race/ethnicity

- Statistically significant increase in transplant rates for African American (AA) candidates, decrease for Caucasian candidates.
- Offer rates up 17% and acceptance rates up 6% for AA candidates.

OPT

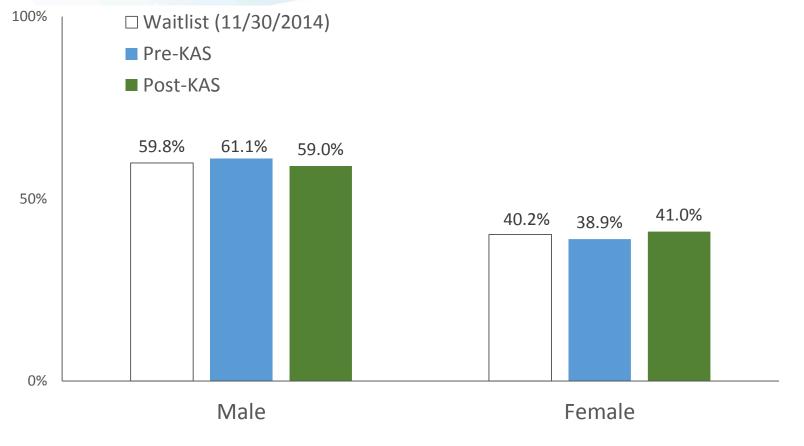

Percentage of Deceased Donor Kidney Transplants by Recipient Primary Diagnosis

**Recipient Primary Diagnosis** 

- Transplants have increased for recipients with hypertensive nephrosclerosis as well as patients needing a retransplant.
- **NOS** Transplants have decreased for diabetics and polycystic kidney disease patients.

#### Percentage of Deceased Donor Kidney Transplants by Recipient Gender

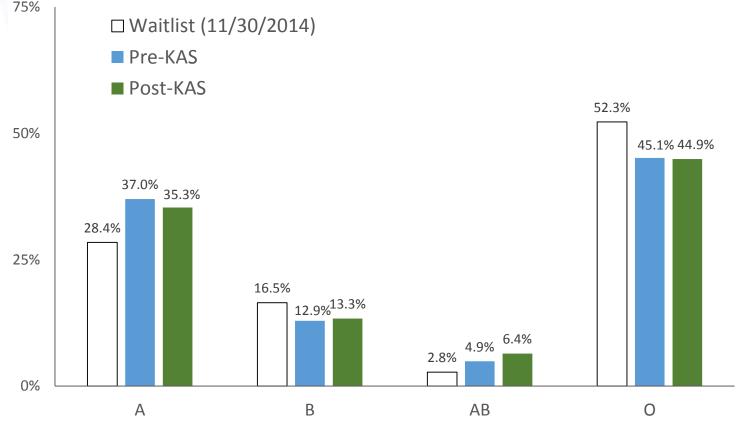

Recipient gender

- Transplants to female recipients have increased slightly under KAS.
- Highly sensitized patients tend to more often be female.

OPT

#### Percentage of Deceased Donor Kidney Transplants by Recipient Blood Type

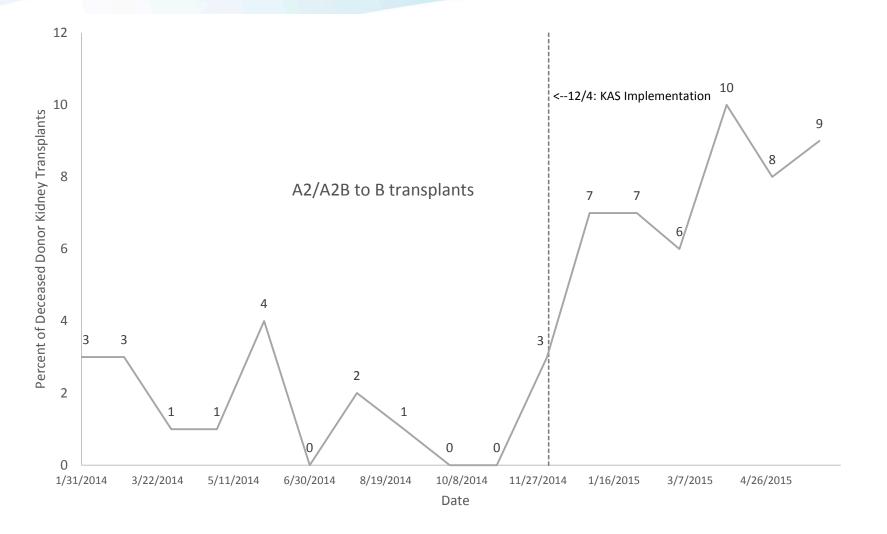

Recipient blood type

- The distribution of transplants has changed little by recipient ABO.
- Slight increases for blood type B and AB patients.

OPTN

# A2/A2B subtype to blood type B recipients

#### Trends

**OPTN NOS** • Sharp rise in A2/A2B transplants, though counts still small.

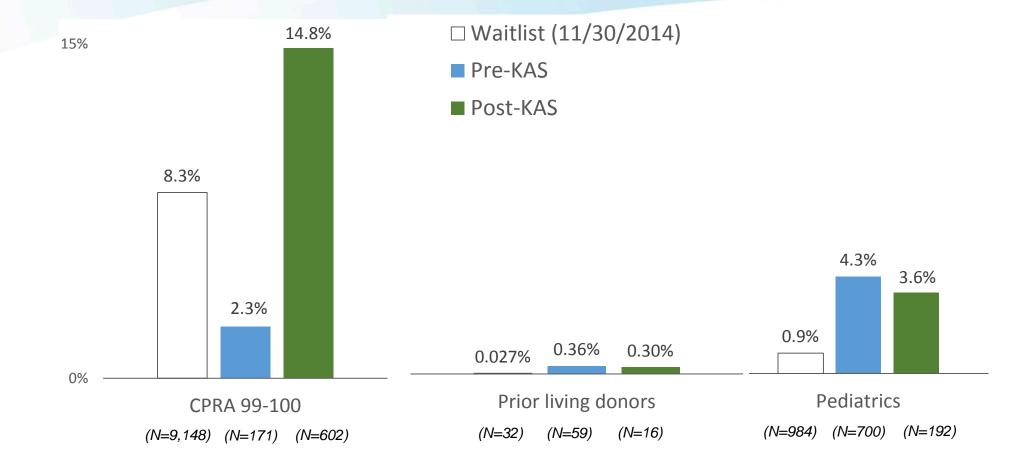

## A2/A2B subtype to blood type B recipients

Pre vs post-KAS summary

Metric	Pre-KAS	Post-KAS
A2/A2B transplants	34	47
A2/A2B transplants (normalized per year)	22.5	95.8
% of transplants	0.2%	0.9%

**OPTN INOS** • A2/A2B $\rightarrow$ B transplants have increased 4-fold.

#### Pediatrics, Highly Sensitized, and Prior Living Donors

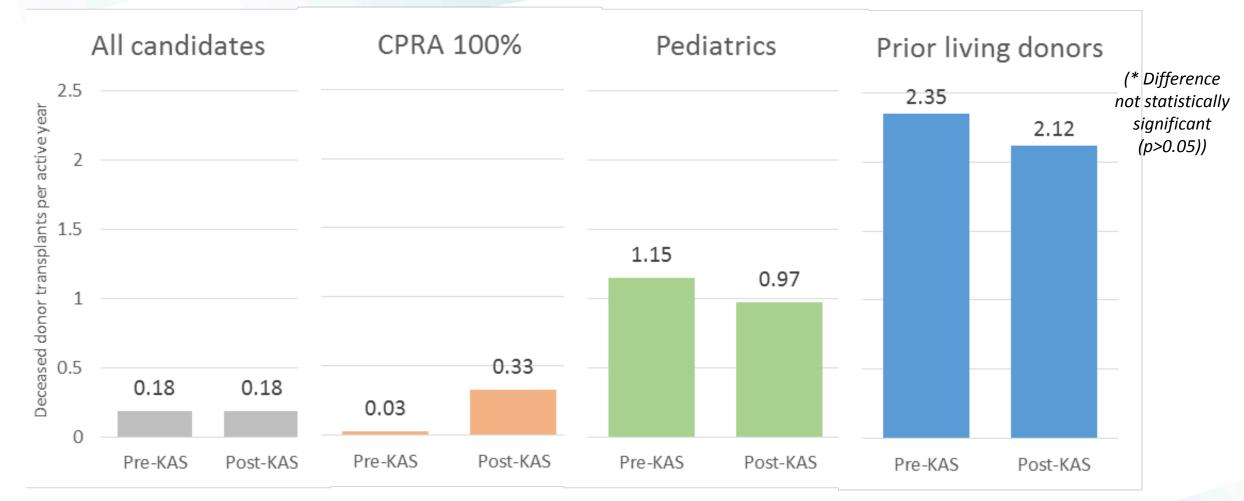

Proportion of transplants relative to WL prevalence under KAS:
 > CPRA 99-100: 14.8/8.3 = <u>1.8</u> PLDs: 0.30/0.028 = <u>11</u> Pediatrics: 3.6/0.9 = <u>4</u>

Eras - Pre: 18 months (June 1, 2013 – Dec 3, 2014) Post: 6 months (Dec 4, 2014 – May 31, 2015)

OPTN

#### Prior living donors' access to transplants Deceased donor transplant rates per active patient-year on the WL

Transplant rates for prior living donors are similar pre vs. post KAS
 and much greater than for other kidney candidate populations.

Eras - Pre: 18 months (June 1, 2013 – Dec 3, 2014) Post: 6 months (Dec 4, 2014 – May 31, 2015)

#### Single vs. Dual vs. En bloc kidney transplants Pre vs post-KAS summary

	Pre-	KAS	Post-KAS		
	N	%	N	%	
Single	15948	97.2%	5239	97.2%	
Dual	144	0.9%	38	0.7%	
En bloc	314	1.9%	111	2.1%	

**OPTN NOS** • Dual kidney transplants have decreased slightly post-KAS.

#### Multi-organ kidney transplants Pre vs post-KAS summary

**OPTN UNOS**<sup>\*</sup>

		Pre-	KAS	Post-KAS		
Multi-organ kidney transplant type	N		%	N	%	
All		2086	11.3%	694	11.4%	
Heart-Kidney		159	1.0%	54	1.0%	
Kidney-Pancreas (KP)		1100	6.3%	346	6.0%	
Liver-Kidney (SLK)		803	4.7%	288	5.1%	
Other		24	0.1%	6	0.1%	

 The proportion of transplanted deceased donor kidneys used in multi-organ transplants has changed little.

Table II.11

# Longevity-matching under KAS

Percentage of Deceased Donor Kidney Transplants by KDPI and Recipient Age

PRE-KAS (6/1/2013-12/3/2014)						
	KDPI					
	<b>KDPI 0-20</b>	KDPI 21-34	KDPI 35-85	KDPI 86-100	All	
AGE	%	%	%	%	%	
0-17	2.9	0.8	0.6	0.0	4.3	
18-34	2.5	1.9	4.4	0.1	8.9	
35-49	5.5	4.5	13.2	0.6	23.8	
<b>50-64</b>	7.1	6.5	23.6	3.7	40.9	
65 Plus	2.9	2.6	13.1	3.6	22.2	
All	20.9	16.2	54.8	8.1	100.0	

POST-KAS (12/4/2014-5/31/2015)						
	KDPI					
	<b>KDPI 0-20</b>	KDPI 21-34	KDPI 35-85	KDPI 86-100	Ali	
AGE	%	%	%	%	%	
0-17	2.5	0.9	0.2	0.0	3.6	
18-34	<b>1</b> 6.7	2.4	4.3	0.1	13.5	
35-49	7.3	4.7	15.9	0.6	28.5	
<b>50-64</b>	<b>↓</b> 2.8	6.0	25.4	3.3	37.4	
65 Plus	<b>↓</b> 1.0	2.2	10.9	3.0	17.0	
All	20.3	16.2	56.5	7.0	100.0	

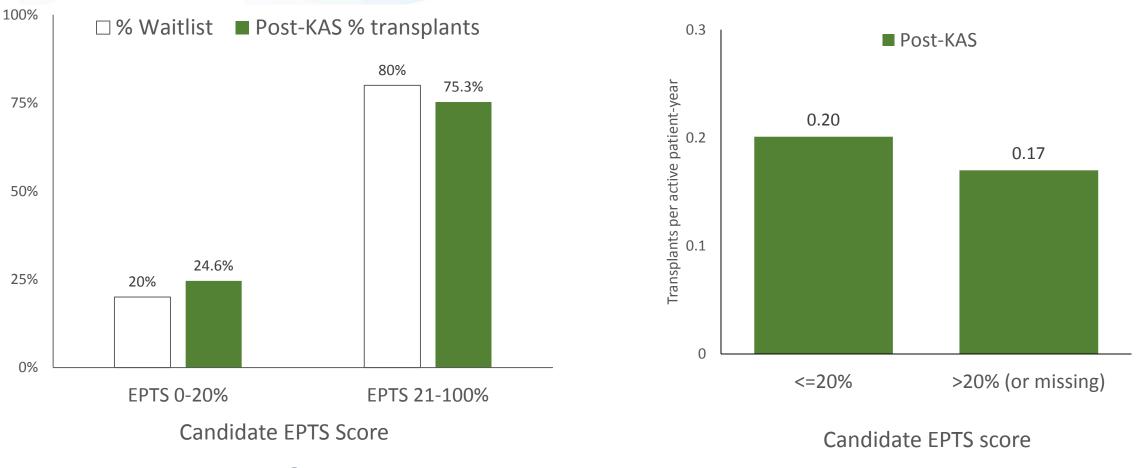

- Transplants with KDPI 0-20% and recipient age 18-34:
  - Pre-KAS: 2.5% of transplants / Post-KAS: 6.7% of transplants
- Transplants with KDPI 0-20% and recipient age 50+:
  - Pre-KAS: 10% of transplants / Post-KAS: 4% of transplants

# Longevity-matching under KAS

- Of KDPI 0-20% kidney transplants, 61% are going to EPTS Top 20% recipients under KAS.
- Under KAS, over half (52%) of EPTS Top 20% recipients received a KDPI 0-20% kidney.
- Increased percentage of pediatric recipients receiving KDPI<35% kidneys:</p>
  - > Pre-KAS (85%) vs. Post-KAS (94%).
- However, a higher % of KDPI>85% kidneys are going to patients under age 50 (8.4% vs. 10% after KAS)

#### OPTN UNOS<sup>®</sup>

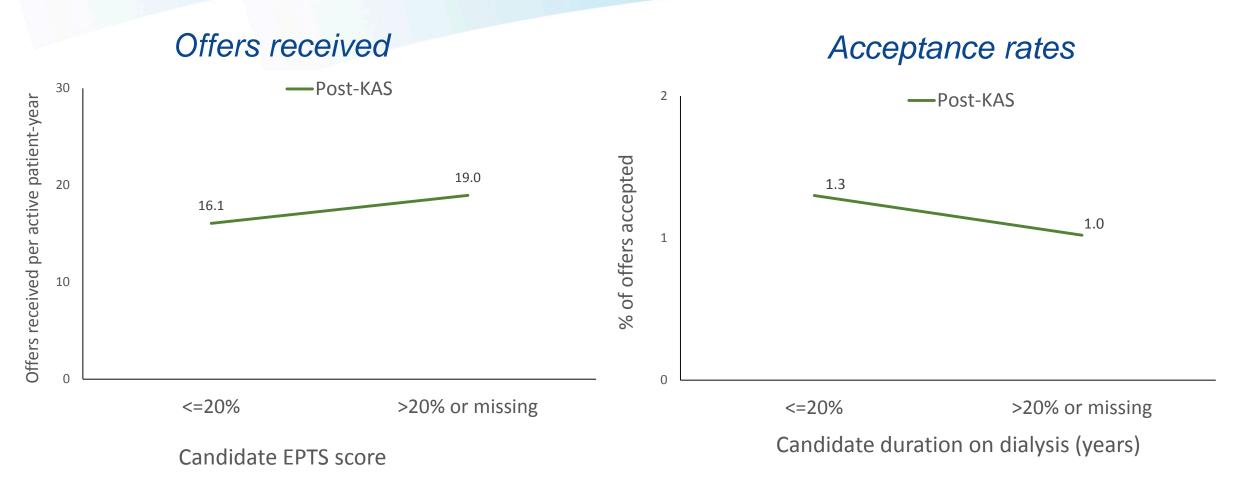

### Post-KAS access to transplants by EPTS score

 EPTS 0-20% candidates have moderately higher access to transplants than EPTS 21-100% candidates under KAS, including 18% higher transplant rates.

Table 1.2a Table II.1b Table II.12

### Post-KAS offer and accept. rates by EPTS score

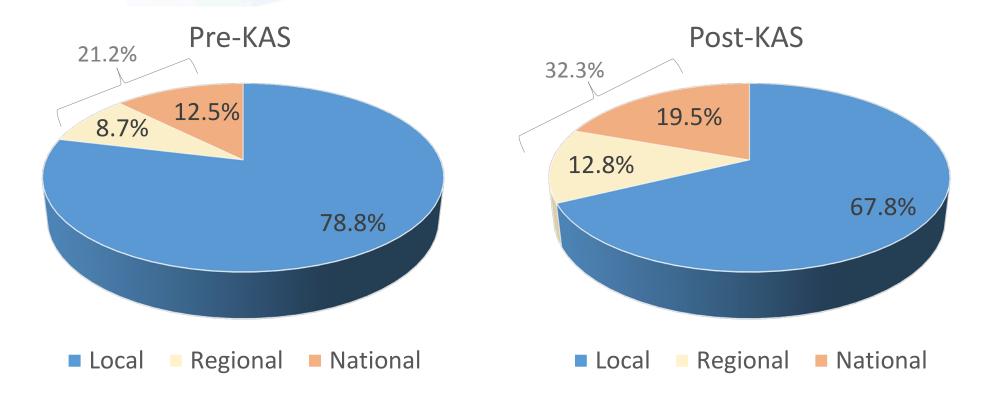

Surprisingly, offer rates were lower for EPTS 0-20% patients.

**OP** 

- However, organ quality was better (lower average KDPI) and acceptance rates for EDTO 0.00% action to use 20% birth and for EDTO 04,400% action to
- EPTS 0-20% patients were 30% higher than for EPTS 21-100% patients.

Table II.13 Table III.5

### Geographic distribution of kidney transplants

**OPTN** 

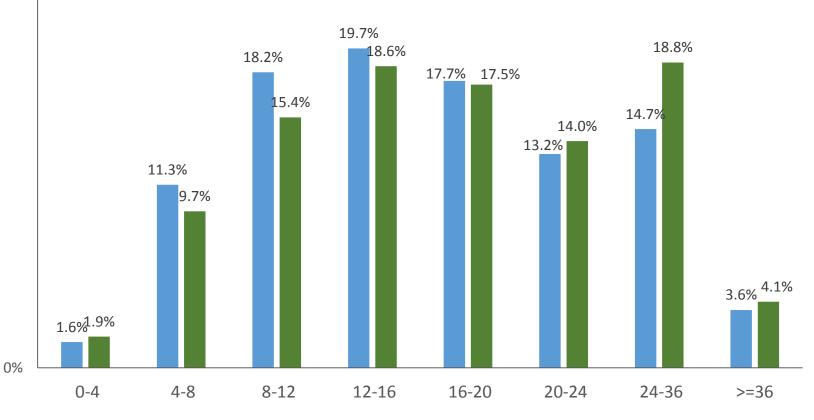

**UNOS**<sup>®</sup>

More kidneys are being distributed outside recovery OPO's DSA.

### Cold ischemic times for transplanted kidneys

Pre-KAS Post-KAS

25%

CIT (hours)

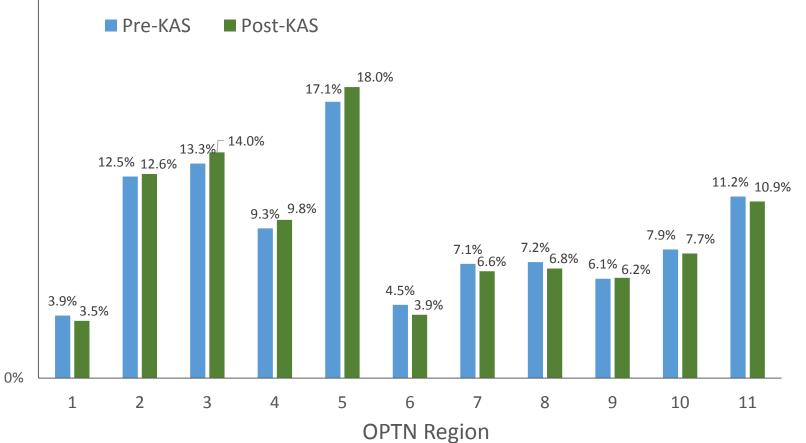

Average CIT increased 6% from 17.0 to 18.1 hours

CIT> 24 hours - Pre-KAS: 18.3%, Post-KAS: 22.9% **OPTN UNOS** 

Table II.1d (known CIT only)

### Geographic distribution of kidney transplants

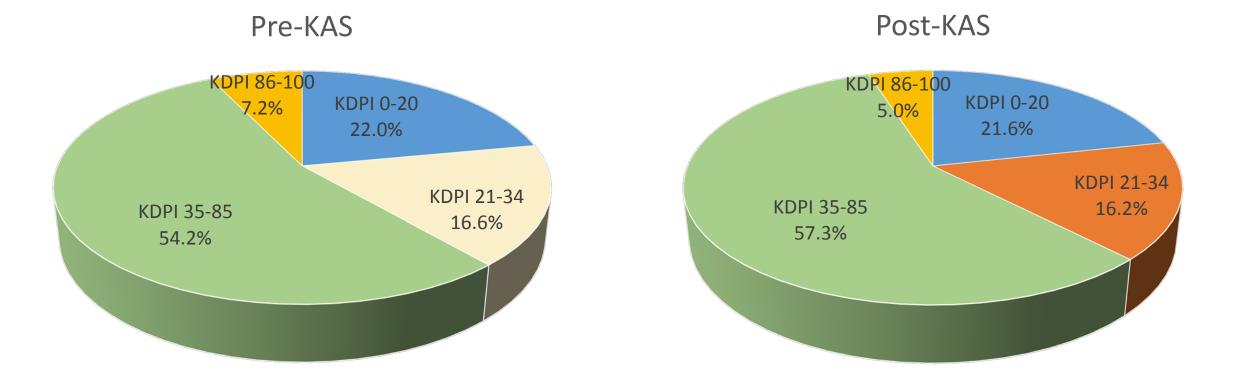

25%

No significant changes by OPTN region.

### **KDPI** distribution of local transplants

**OPTN** 

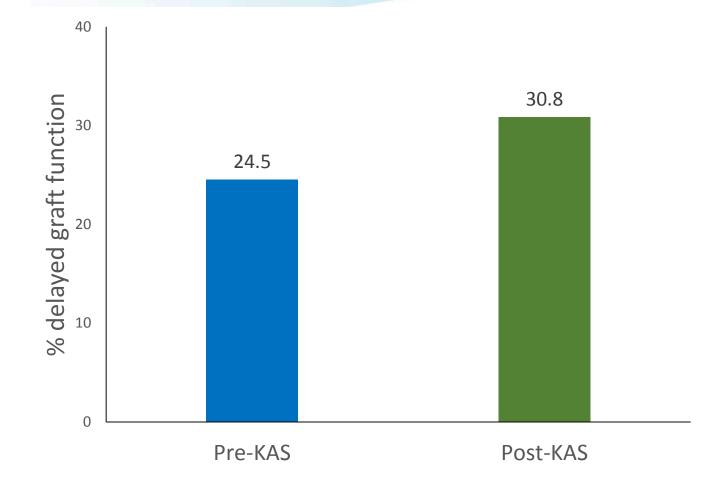

Though fewer transplants are occurring locally, approximately the same percentage had KDPI 0-20% kidneys: Pre (22.0%), Post (21.6%) (inference)

(inferred from Table II.e)

### Delayed graft function (DGF) rates

**OPTN** 

**UNOS**<sup>®</sup>

 The percentage of recipients requiring dialysis within the first week after transplant increased from 24.5% pre-KAS to 30.8% after KAS.

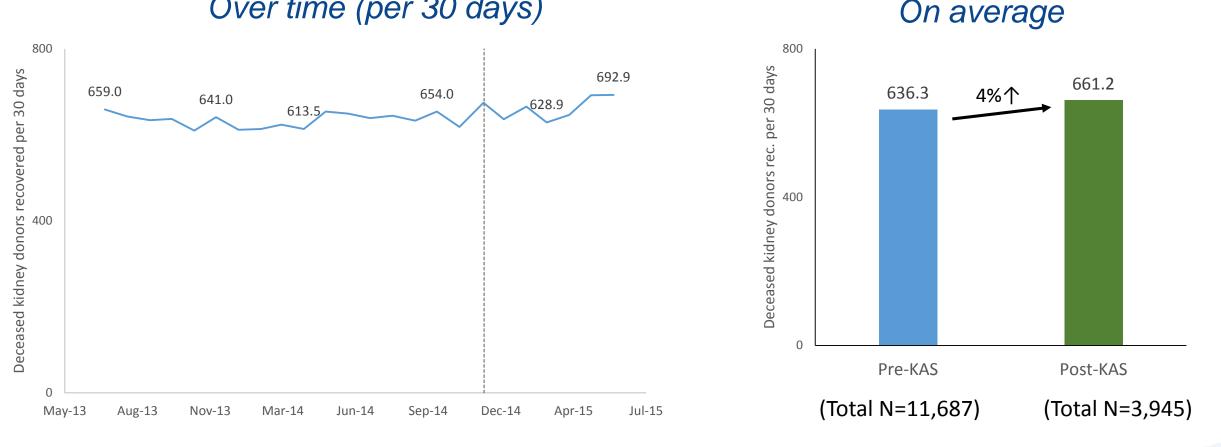

### Deceased donor kidney recovery and utilization

### Deceased kidney donors recovered under KAS Pre vs. post-KAS trends

#### Over time (per 30 days)

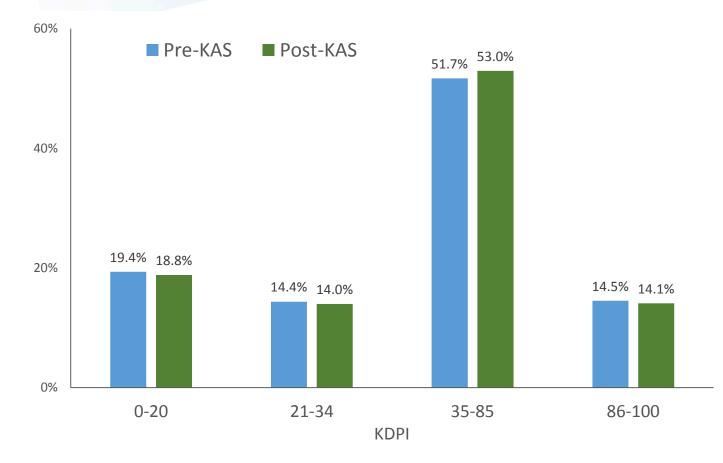

**OPTN** 

Recovered kidney donor volume has increased 4% post-KAS.

Table II.1a

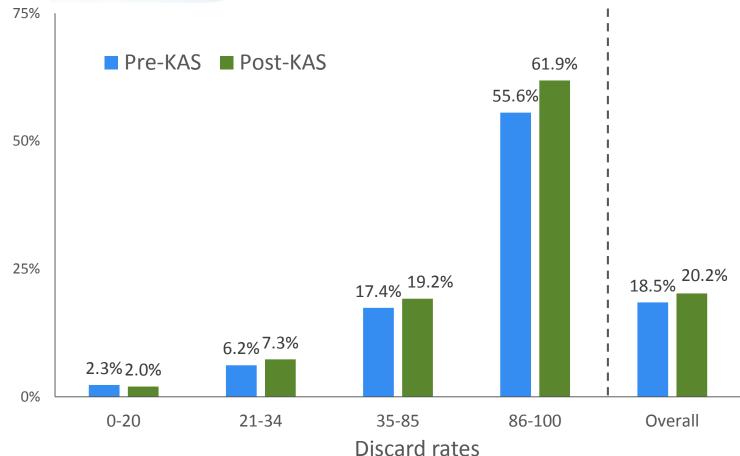

### Kidney recovery & utilization under KAS Percentage of Recovered Deceased Kidney Donors by KDPI

**OPT** 

- Total kidney donors recovered per month increased 4% (636 to 661).
- However, the distribution by KDPI has remained very similar.

# Kidney Discard Rate by KDPI

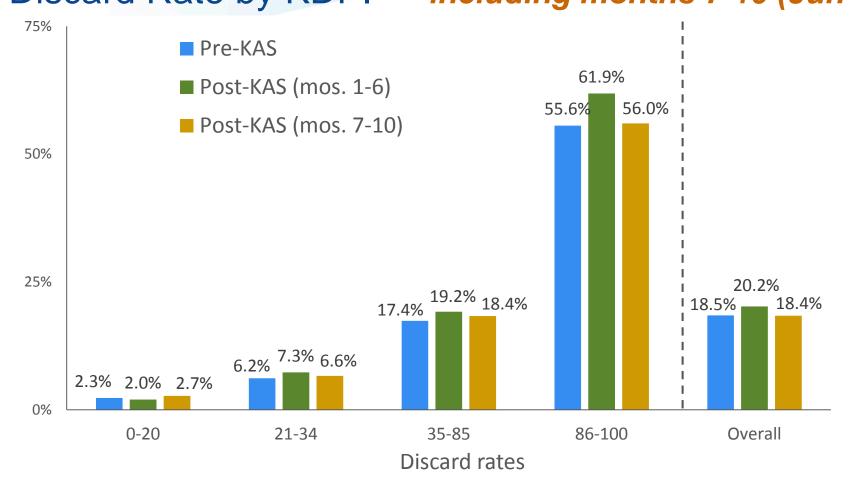

**OPT** 

Kidney discard rates increased by 1.7% points (about 10%).

Increase largest for, but not limited to, KDPI>85% kidneys.

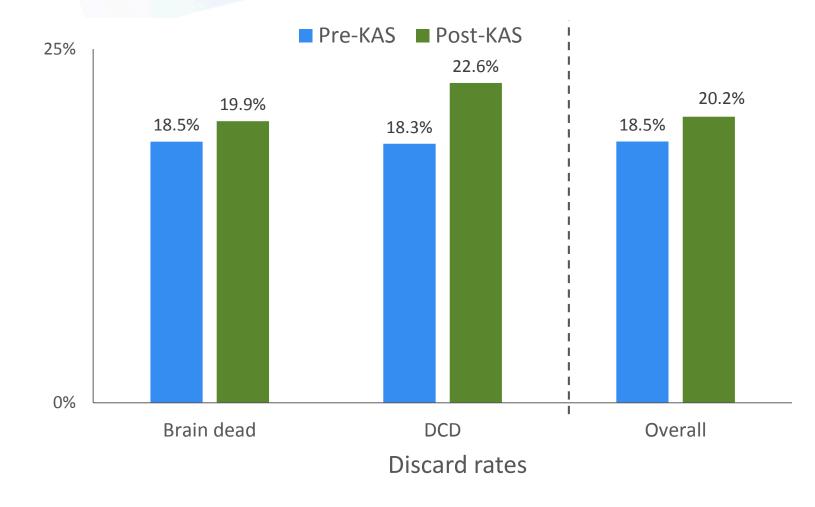

# Kidney Discard Rate by KDPI -- *including months 7-10 (Jun – Sep '15*)

OPTI

 Discard rates have returned to pre-KAS levels in recent months.

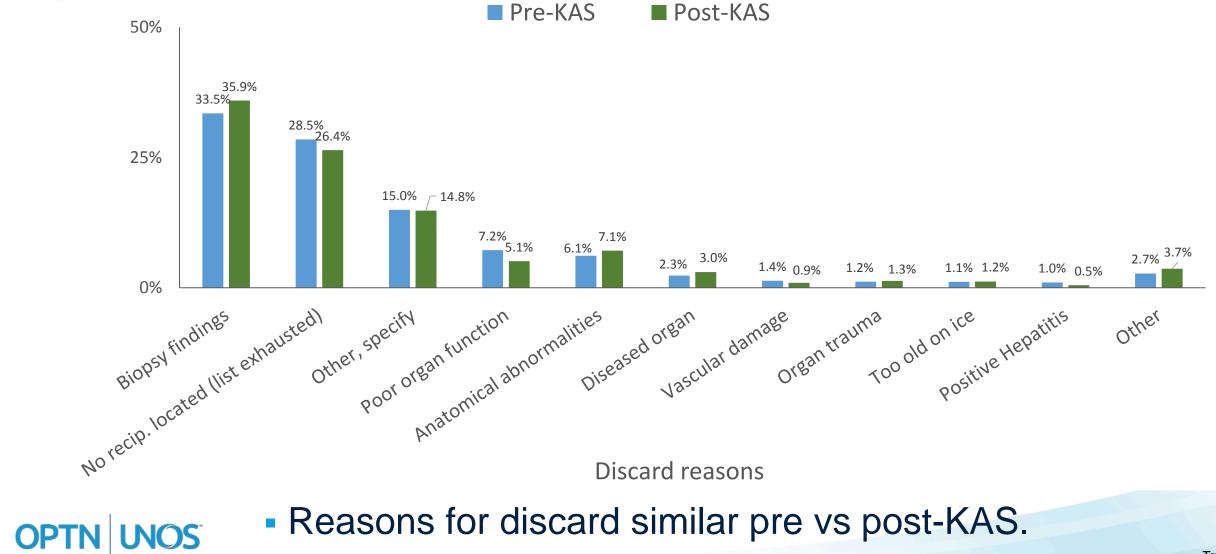

# Kidney Discard Rate by DCD vs. BD

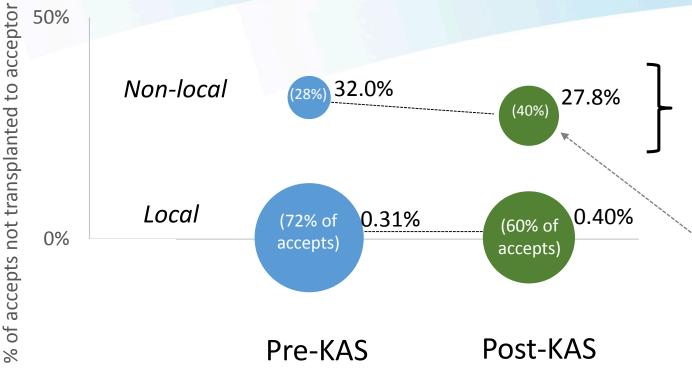

**OPTN INOS** • Greater discard rate increase for kidneys from DCD donors.

## Kidney recovery & utilization under KAS

#### **Kidney Discard Reasons**

### Accepted Offers Not Transplanted to the Acceptor\*

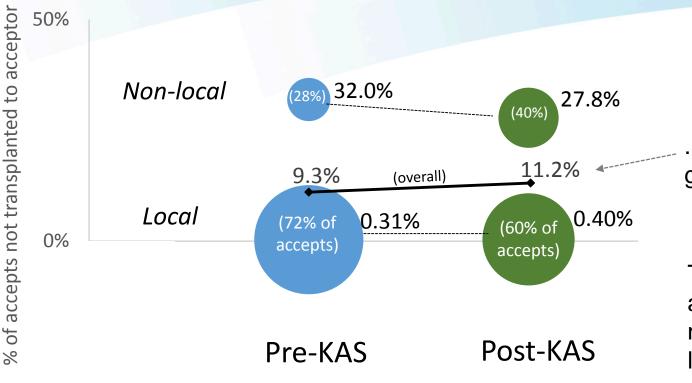

(size of bubbles reflects relative number of accepted offers)

Post-KAS, a *smaller percentage* of non-local, accepted offers are not going to the acceptor. (This is also true for the subset of CPRA 99-100% non-local acceptances:  $26.5\% \rightarrow 18.2\%$ .)

However, substantially more of the accepted offers are non-local under KAS (28% to 40%), which has lead to... *(next slide)* 

(\*DonorNet acceptance data may not include all cases and should be interpreted cautiously.)

### Accepted Offers Not Transplanted to the Acceptor\*

(size of bubbles reflects relative number of accepted offers)

...an *increase* in the overall % of accepts not going to the accepting patient.

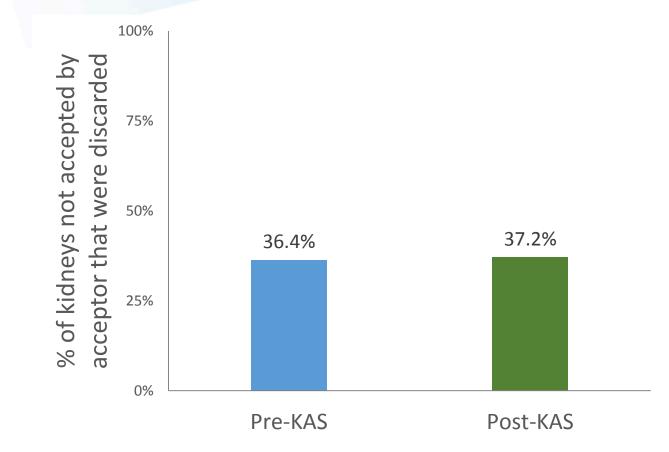

This is because the overall numbers (9.3% and 11.2%) are weighted averages of local and non-local offers, and 40% of the weight is non-local in the post-KAS era.

(Example of "Simpson's Paradox")

- Bottom line: More kidneys are not going to the acceptor under KAS.
- However, this is because more kidneys are being allocated non-locally, not because of less efficient allocation of shipped kidneys.

If the non-local rate had not improved but remained at 32%, the overall rate would have been 12.9%.
 OPTN NOS (\*DonorNet acceptance data may not include all cases and should be interpreted cautiously.)

### Accepted Offers Not Transplanted to the Acceptor Percent Discarded

- Just over a third of kidneys accepted but not transplanted to the accepting patient were discarded, pre and post-KAS.
- The remaining kidneys were transplanted into another recipient.

**OPTN** 

### Summary: First Six Months of KAS

- Overall KAS is meeting key goals
  - Highly successful 6-month pre-KAS preparation period
  - Decrease in longevity mismatches
  - Increase in the number of transplants among very highly sensitized patients
  - Increase in access to transplant for African Americans candidates
- "Bolus effects": the percent of transplants to CPRA 99-100% and dialysis>10 years recipients are both tapering post-KAS
- Increase in A2/A2B $\rightarrow$ B transplants, but still room for growth
- Transplant volume up 1%

### Summary: First Six Months of KAS (cont'd)

- Several trends deserve further attention:
  - Fewer 0MM transplants
  - Slight drop in pediatric transplants will continue to be tracked closely
  - Logistical challenges in allocation
  - Increased CIT and DGF
  - Increase in discard rates, particularly KDPI>85% kidneys. Rates appear to be returning back to pre-KAS levels based on months 7-10.
- Other metrics (e.g., graft survival rates) require additional lag time and will be available in future reports

### OPTN UNOS
